#See the Smiley Face in Right Corner of your Terminal

Our “Trend Hunter” EA installation complete.

Chapter 3: Introduction of “Trend Hunter” EA Settings:

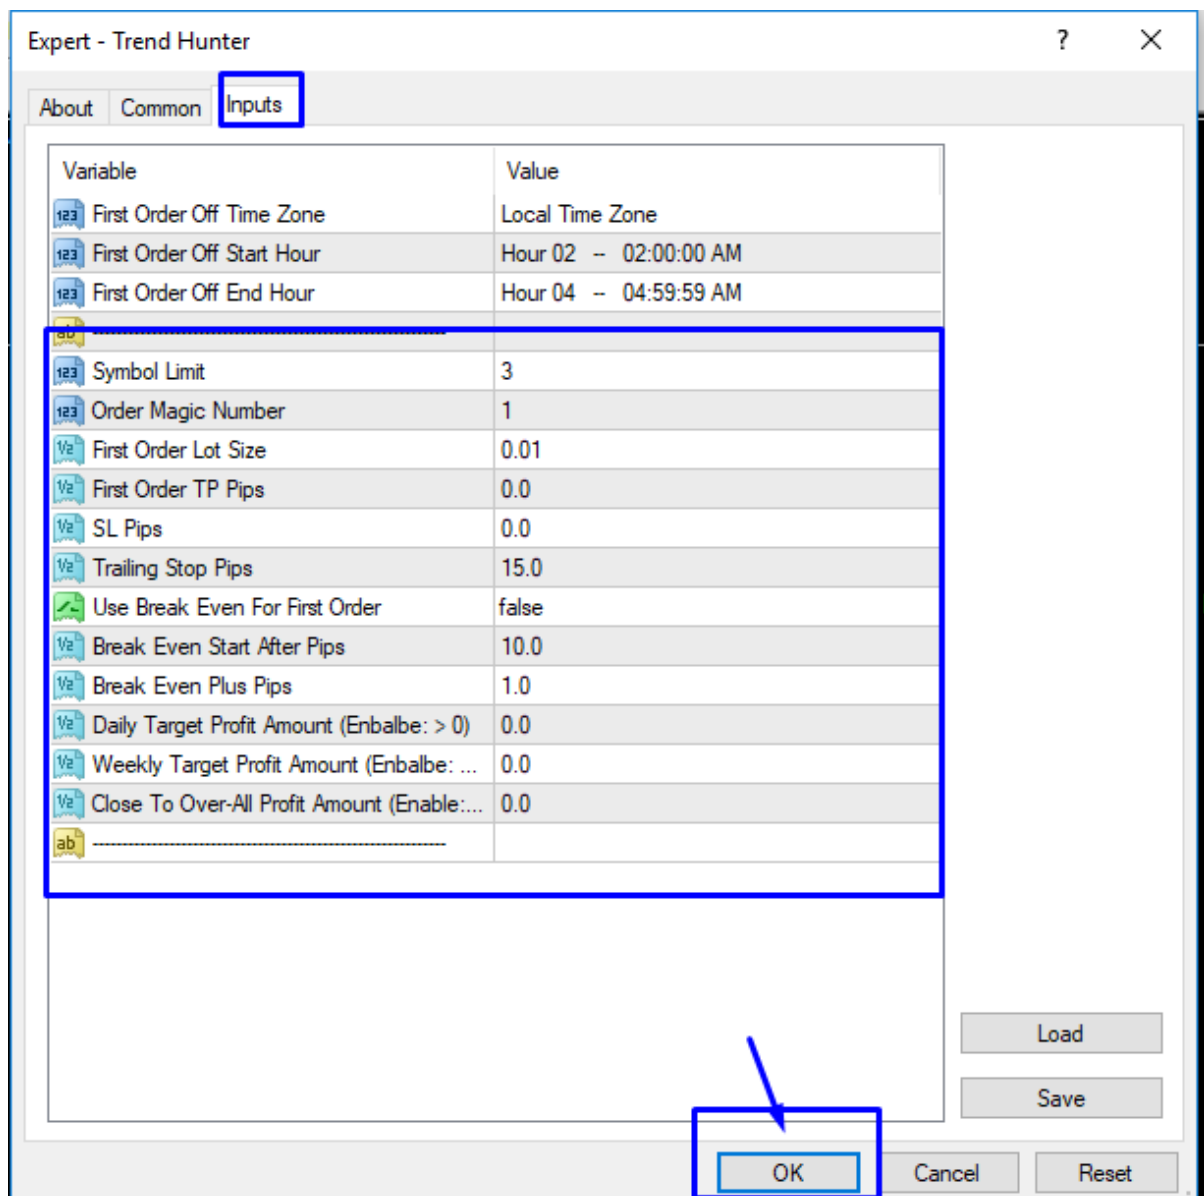

- Click on input Files you see “Trend Hunter” EA settings:

Blue Marking Settings is “**Time Zone**”. Default Time Zone is **GMT6+**. We saw that 1 hour before day candle closing and 2 hours after day candle opening time market slippage increases and make false signals in any system. So for avoiding this

slippages of markets and false ups and downs moments **“Trend Hunter”** EA will stop to take entry that time. So for this option you should select your time of start hour and end hour by your local time.

Note that if you use VPS for running “Trend Hunter” EA must change your VPS time zone .VPS time must be set it as like as exact time zone which you set already in “Trend Hunter” EA.

- 1) **Symbol Limit: 3** (It selection of pairs running. No need to run it more than one charts or selected pairs. Because **“Trend Hunter”** EA can find signals from one chart for you. You can use 1-30 numbers for your trading. It fully depends on your investment and how much risk you want to take. For 500-1000\$ standard account balance we suggest 10-20 pairs)

- 2) **Order Magic Number: 1** (If you want to run it more than one chart then this option need. For this you have change order number from "1" to "2" in second charts. But we do not advise it. No need to run "Trend Hunter" more than one charts)
- 3) **First Order Lot Size: 0.01** (This is starting volume. You can increase your volume. Depends on your balance and your risk taking mentality.)
- 4) **First Order TP Pips: 0.00** (Default is zero. Because for first we suggest always trailing stop using. If you want to put any TP area you can change.)
- 5) **SL Pips: 0.00** (Default is zero. Because Trend Hunter EA has lowest drawdown if you run it safely. But if you want to place any SL area you can change it.)
- 6) **Trailing Stop Pips: 15.00** (Default value is 15.00 pips. For shorter time frame you should decrease trailing stop pips and for longer time frame you should increase more)
- 7) **Use Breakeven for First Order: False** (Default is false. If you want to use it click the button and set "True".)
- 8) **Breakeven Start after Pips: 10.0**(Default value is 10 pips. When First order goes 10 pips positive EA automatic set SL in Breakeven Point. This option work when 7 no. option is "True")
- 9) **Break Even Plus Pips: 1.0**(Default value is 1 pips. When first order goes 10 pips plus positive then EA set SL into Breakeven point+ 1 pips. This option work when 7 no. option is "True")
- 10) **Daily Target Profit Amount (Enable :> 0):0.0**(Default value is 0.0. This options for those traders who want to close their daily income daily. Set your desire profit target, if in this day "Trend Hunter" EA make robot close all trades automatically and stop taking entries. Then you have to disable robot trade for this day.)
- 11) **Weekly Target Profit Amount (Enable :> 0):0.0**(Default value is 0.0. This options for those traders who want to close their weekly income weekly. Set your desire profit target, if in this weekly "Trend Hunter" EA make robot close all trades automatically and stop taking entries. Then you have to disable robot trade for this week.)
- 12) **Close to Overall Profit Amount (Enable :> 0):0.0**(Default value is 0.0. This options for those traders who want to close their overall monthly income monthly. Set your desire profit target, if in this month "**Trend Hunter**" EA make profit robot close all trades automatically and stop taking entries. Then you have to disable robot trade for this month.)

- **After the all settings set Click "Ok" Button**

Chapter 4:How to use “Trend Hunter” EA:

“Trend Hunter” is based on price action formula. For this reason higher time frame is the most preferable. H1 is the best time frame for Trend Hunter EA. Trailing stop should be 15 pips. Use breakeven option and Use it 10 pips default. First TP we think avoid because trailing stop can make you secure. But is your choice. Symbol Selection is depends on your balance. 500\$-1000\$ we suggest use 10-20 pairs. Just write your desire symbol limit number in “Symbol Limit” option. Default value is 3. But you can decrease and increase against your investment. Other option you can change your wish.

“Trend Hunter” EA works well on M30, H1 and H4. But you can use it anytime frame.

For standard account need 500\$ minimum start. 1:500 minimum leverage.

Below 500\$ we suggest use it in cent account.

“Trend Hunter” EA Features:

- It is based on Trend. No trade it takes against trend. For this reason we suggest long time frame. But it can use short time frame and long time frame both. M30, H1 and H4 is preferable for running this EA.
- It can measure strong and weak currency automatic.
- Auto recovery system.
- Major news time “Trend Hunter” has ability to analysis through technically.
- Low risk is main priority
- Low balance can run through “Trend Hunter” EA.
- Drawdown would be 20-30% maximum against your investment. Depends on how much you taking risk. If you take risk normal then drawdown would be 10%-20%.
- 40%-100% Profit it can generate .Profit generating ratio is also depends on your risk taking mentality, but through a conservative way it can bring 40% profit monthly.

End of our EA Manual. Wish you best of luck. “Trend Hunter” EA is a conservative EA .You can make it aggressive through modify EA settings. But Sure Fx Team always consider safe trading. So if you want safe income “Trend Hunter” EA is for you. Wish more and more profit from Forex Market.

Thanks,

Sure Fx Team
